### 13/05/2014 Cordia unveils innovative fire-safety equipment and training at Firex

**Cordia of France, a major player in the fire-safety sector, will be exhibiting for the first time at the Firex International trade show, which will take place in London (UK) from 17 to 19 June 2014. Cordia provides an extensive range of fire-safety solutions and technologies and will present two of its flagship product ranges – fire alarms and training material – at the trade fair.**

Cordia has been a key player in the industry for over 25 years, and the company's innovations have contributed towards a radical modernisation of the fire-fighting equipment that is available in the market. As the inventor of the flame generator and of the first wireless fire alarm, Cordia is constantly looking to introduce new solutions aimed at improving fire-fighting equipment.

Cordia's presence at Firex International will provide the opportunity to introduce its two flagship product ranges, i.e. fire alarms and training material. These two product ranges are the result of extensive R&D projects conducted by Cordia. The company will be exhibiting on stand R200 at Firex International, which will take place from 17 to 19 June of this year at the EXCEL exhibition centre, in

London.

The advantage of Cordia's range of fire alarms is that it provides a choice of products that can respond to any situation. Products in the range include sector alarms and autonomous battery-operated alarms, but Cordia's leading product is the long-range wireless alarm.

The impressive performance features of Cordia's long-range wireless alarm include the unmatched power and security of the radio signal, as well as the ability to connect more than 100 alarms – including flash wireless compatibles – to one network. The alarm's *Vision 4* software allows the user to identify, on a computer, the activated call point in a wireless-alarm network. The product is easily attached to the wall and no specific configuration is necessary.

The range of training material offered by Cordia represents a much more modern approach to training in relation to devices such as flame generators, smoke generators and stress generators.

Cordia's patented communications protocol, *Smartway*, links a touch-screen tablet to a range of training devices and makes it possible to activate the various training tools, while monitoring in real time the state of each device (on, off, successful extinguishing, etc.). Cordia's Smartway device is a world's first in that it provides the permanent solution of combining (and driving) several training devices from a single remote-control point, i.e. the touch-screen tablet already referred to.

With the *Log to Smartway* application on a tablet device, users are able to configure training sessions in advance and save them to a calendar, access the driving commands of all training tools, validate the performance of trainees, and automatically generate reports of all sessions.

Cordia will be presenting its entire range of *Intelligent and Tactile* products at the Firex International trade show, including *Satellit* flame generators, *Opacit* smoke generators, and *Stressit* stress generators.

## **About Cordia**

Cordia has provided fire-safety equipment since 1987, when it was set up by Jean-Yves Maturel, the company's founder and CEO. Cordia is

headquartered in Mitry-Mory, to the North-East of Paris (France), close to Roissy Charles de Gaulle airport.

With the launch of the English version of its comprehensive online catalogue, the company is seeking to expand internationally and, more particularly, in the British market.

Cordia will be exhibiting on stand R200 at the Firex International trade show, which will take place at the EXCEL exhibition centre in London (UK) from 17 to 19 June 2014. Firex International is the leading event in fire protection, prevention and detection, offering a comprehensive selection of the latest products and innovations as well as the opportunity to network with leading industry professionals.
